

Dashboard Design

Data Visualizations

About Projects

Designed Dashboard for different segments which includes KPI Dashboard, IIoT Dashboard for Industrial Automation etc.

ITC KPI Dashboard

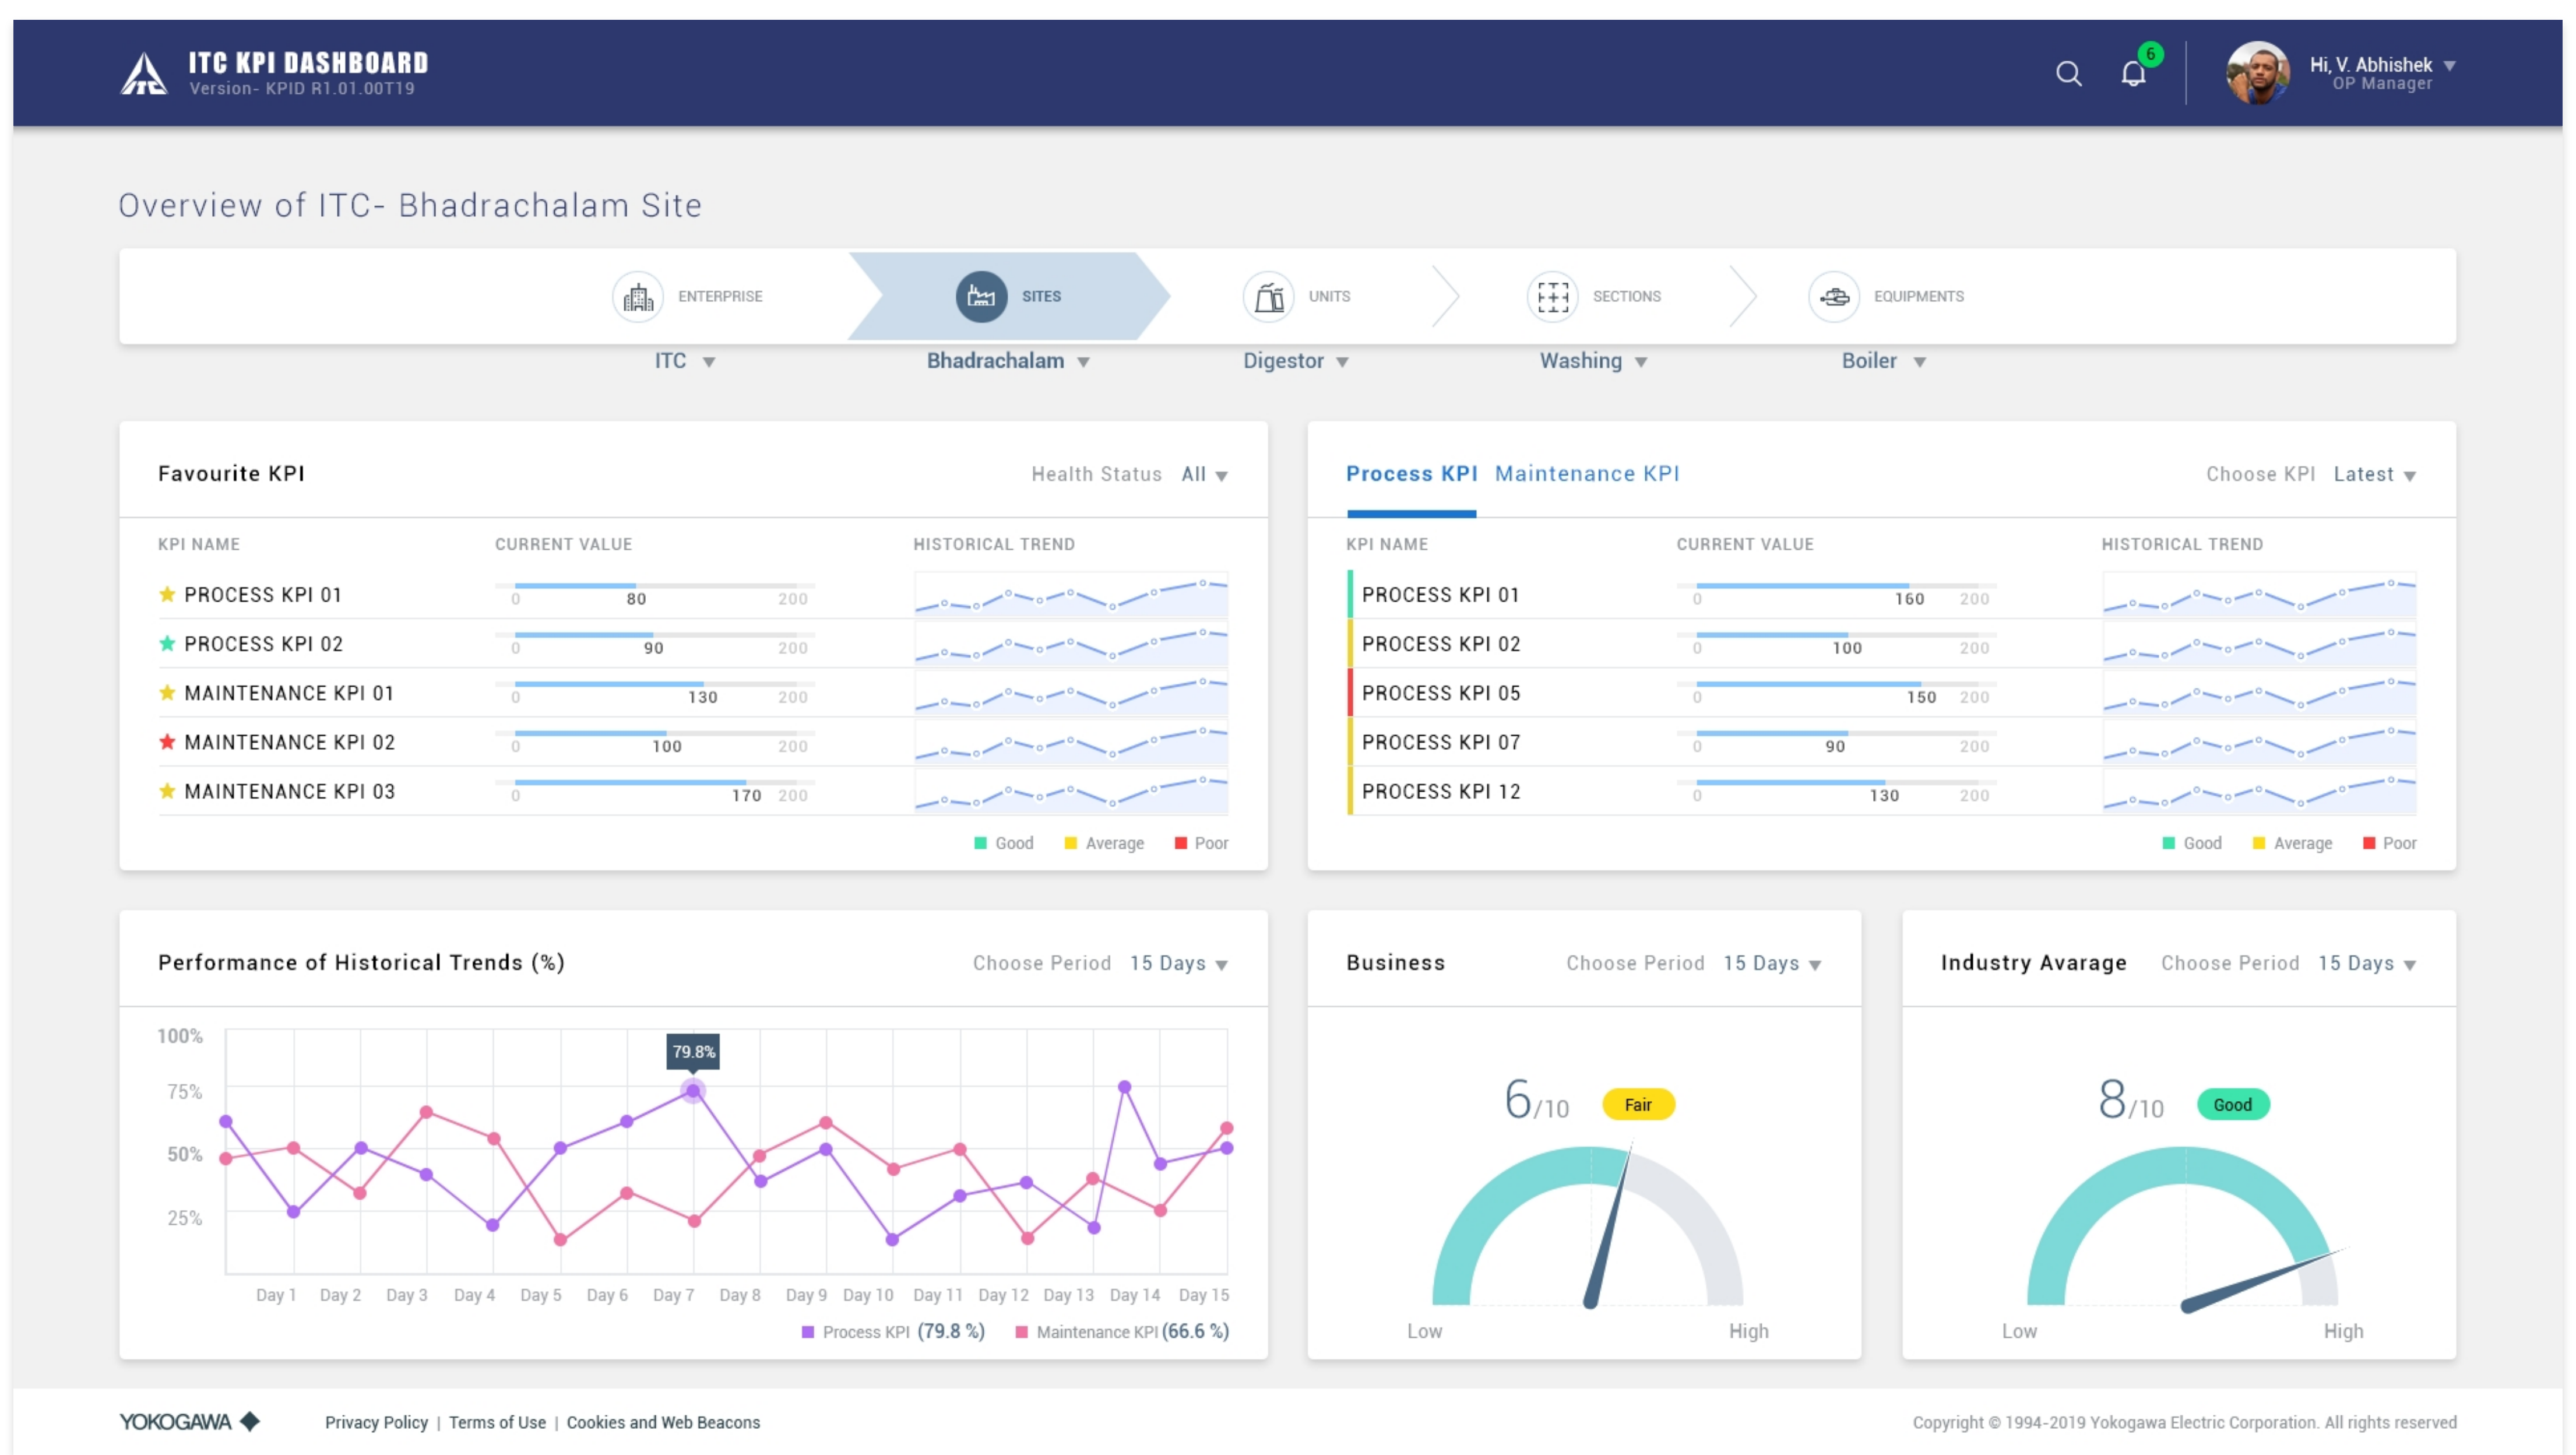

The ITC KPI Dashboard provides an overview of the vital business metrics for the ITC Process Industry (Integrated Pulp & Paperboard Manufacturing Facility Industry). This enables the users in establishing the business needs, managing the underlying processes, and monitoring the associated KPIs of the ITC Process Industry. Based on the goals of the business, both high-level and low-level KPIs can be accommodated in the dashboard.

My perspective as a UX Designer

As a UX Designer, my role was to create an intuitive Dashboard that shows useful information at a glance. The goal was to simplify the visual representation of complex data so that it helps the stakeholders to understand and generate key insights quickly.

Highlights

- All essential information is immediately accessible.
- Information is displayed in a level-based hierarchy.
- Elements are displayed in a minimized view, wherein more details could be viewed as necessary.
- Simplified Design for seamless User Experience.

Amnimo VAP (Value Added Partners)

Amnimo VAP is an application Designed for Amnimo Value Added Partners. This B2B portal lets the Value-added partners create solutions based upon Amnimo services. Amnimo provides IIoT Devices, Cloud Space etc on a subscription basis and the VAP partner can create solutions using these resources. The portal helps VAP to bring his concept to reality using options to combine subscriptions, business logic, UI etc. and create an IIoT solution for the End-Customers.
